

English Version

**Packaging for terminally sterilized medical devices - Part 2:
Validation requirements for forming, sealing and assembly
processes (ISO 11607-2:2006)**

Emballages des dispositifs médicaux stérilisés au stade
terminal - Partie 2: Exigences de validation pour les
procédés de formage, scellage et assemblage (ISO 11607-
2:2006)

Verpackungen für in der Endverpackung zu sterilisierende
Medizinprodukte - Teil 2: Validierungsanforderungen an
Prozesse der Formgebung, Siegelung und des
Zusammenstellens (ISO 11607-2:2006)

This European Standard was approved by CEN on 13 April 2006.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Introduction

One significant barrier to harmonization was terminology. The terms “package”, “final package”, “final pack”, “primary pack”, and “primary package” all have different connotations around the globe and choosing one of completion of this document. As a result, the term “sterile barrier system” was introduced to describe the sterilization, to provide an acceptable microbial barrier, and to allow for aseptic presentation. “Protective packaging” protects the sterile barrier system, and together they form the packaging system. “Preformed sterile barrier systems” would include any partially assembled sterile barrier systems such as pouches, header
